Department of the Interior.

Books are issued to and returned by employes, between the hours of 11 a. m. and 2 p. m. on all days except Sundays.

The Library is open to employes, for reference, from 9 a. m. till 1 p. m.

LIBRARY RULES.

1. The employes of the Department of the Interior only are authorized to borrow books from the Library.

2. Before being allowed to draw books employes will be required to file with the Librarian a certificate of identity from the Chief Clerk of the Department or of the Bureau or Office in which employed.

3. No book will be taken from the Library until its title and the name of the borrower shall have been registered by the Librarian.

4. Of works of single volumes only one at a time may be borrowed; of works of two or more volumes two may be taken.

5. The period of a loan of books is for two weeks, and borrowers are strictly prohibited from lending books thus drawn to other persons, whether of the Department or not.

6. Borrowers wishing to retain books for a longer period than two weeks, may at the close of the second week renew the loan for an additional two weeks.

7. The loan of a book will be renewed but once.

8. Books classed as 'Works of Reference' or marked in the Catalogue with an 'r' cannot be taken from the Library.

9. When a book has been injured while in the possession of a borrower, it must be replaced by a perfect copy.

10. Application for and return of books must be made in person, except in cases of sickness or absence from the city.

11. Books returned will not be reissued until they have been examined and replaced upon the shelves.

12. When a book has been retained by a borrower beyond two weeks without renewal its price will be certified to the Disbursing Officer of the Department, and deducted from the salary of the person withholding it.

13. Writing on the leaves or covers of books, and the folding or turning down of their leaves are strictly prohibited; violation of this rule will deprive employes from further privileges of the Library.

14. In selecting books from the shelves, care must be used in handling them, replacing those not drawn on the shelves from which they were taken; the number of the shelf may be ascertained from the label above.

15. Employes, on quitting the service of the Department must return all books in their possession belonging to the Library. Final payment of their salaries will be withheld by the Disbursing Officer until he is satisfied that all books charged against them at the Library have been returned.

16. New books can be drawn for one week only, and not renewed.

17. Current periodicals can be drawn for three days only, and not renewed.

18. For infractions of any of the above rules the Librarian is authorized to suspend or refuse the issue of books to the culpable persons.

By order of the Secretary.

ADVERTISEMENT.

The present series, entitled "Smithsonian Miscellaneous Collections," is intended to embrace all the publications issued directly by the Smithsonian Institution in octavo form; those in quarto constituting the "Smithsonian Contributions to Knowledge." The quarto series includes memoirs, embracing the records of extended original investigations and researches, resulting in what are believed to be new truths, and constituting positive additions to the sum of human knowledge. The octavo series is designed to contain reports on the present state of our knowledge of particular branches of science; instructions for collecting and digesting facts and materials for research; lists and synopses of species of the organic and inorganic world; museum catalogues; reports of explorations; aids to bibliographical investigations, etc., generally prepared at the express request of the Institution, and at its expense.

In the Smithsonian Contributions to Knowledge, as well as in the present series, each article is separately paged and indexed, and the actual date of its publication is that given on its special title page, and not that of the volume in which it is placed. In many cases works have been published and largely distributed, years before their combination into volumes.

INDEX	369

INTRODUCTION.

Early in 1872 I submitted to the Secretary of the Smithsonian Institution, the late Joseph Henry, a manuscript entitled "A Table of Specific Gravities, Boiling Points, and Melting Points for Solids and Liquids." It was accepted for publication, and in February, 1874, the printed copies were ready for distribution. For years previously Professor Henry had had in mind the publication of a series of similar tables somewhat upon the plan long before suggested by Babbage, and accordingly my modest work was given the somewhat ambitious title of "The Constants of Nature" and made the first part of the proposed undertaking. Subsequently Parts II, III, and V were furnished by myself and Part IV by Professor G. F. Becker, and in 1876 I also published a supplement to Part I.

The following tables form, in effect, a new edition of Part I, completely revised, rearranged, and brought down as nearly as possible to the date of printing. They are, however, modified by the omission of boiling and melting points, except when such data seemed essential to the proper identification of a compound, on the ground that the magnificent tables of Professor Carnelley already supply that want. I have limited myself to specific gravity alone, following in the main the plan of arrangement adopted in my earlier work, with such changes as were made necessary by the later developements of chemical thought. Constitutional formulæ have been used, not according to any fixed rule, but according to convenience, and their adoption has been governed, to some extent, by the limitations of the octavo page. All other details have been subject to the same limitations, and it is hoped that their absence will be compensated for by the almost uniformly full references to literature. Some data could not be traced back to their original sources, at least not without unwarrantable labor, and most of these formed part of an early table prepared nearly twenty years ago for my own private use. A few determinations are accredited to standard works of reference, such as Watts' Dictionary, Dana's Mineralogy, and the like, and many have been drawn from the *Jahresbericht*. Absolute completeness cannot, of course, be claimed, and in some directions it has not

even been attempted. Among minerals, only those having approximately definite formulæ are given, and indefinite substances have been excluded altogether. The tables aim at reasonable completeness only as regards *artificial substances of definite constitution*, and all else is gratuitous. A good many determinations of specific gravity have been unearthed from doctoral dissertations, school programmes, and similar foes of the bibliographer, and doubtless other data so printed have escaped my notice altogether. There is a weakness of human nature which, masquerading as patriotism, sometimes leads men of science to bury valuable researches in obscure local publications, and a compiler may never flatter himself that no such paper has eluded his vigilance. I shall be glad to receive notice of all omissions, and will try to rectify such or other errors in future supplements or appendices.

A word in conclusion as to the extent of the table. They contain the specific gravities of 5,227 distinct substances and 14,465 separate determinations. The original edition gave only 2,263 substances, to which nearly 700 were added in the supplement. The increase is a noteworthy indication of existing chemical activity.

EXPLANATORY NOTES.

In references to literature the following abbreviations have been used. In each case, as far as practicable, series, volume, and page are indicated, the page reference signifying, according to circumstances, either the first page of the paper cited, or else the actual page upon which the determination is given. The former rule applies to pages containing many data; the latter to cases in which the specific gravity datum is merely incidental.

* For sp. gr. of silicates before and after fusion see v. Kobell, Bei. 6, 314.

NOTE.—As regards the natural silicates this table is far from complete. Only those compounds are included which admit of fairly definite chemical formulation, and only a few typical determinations of specific gravity are given in each case. Furthermore, the arrangement is absolutely chemical, and is in no sense dependent upon mineralogical considerations. Thus, for example, all the magnesium silicates are brought together; and so also are the numerous double silicates of aluminum and calcium, quite regardless of their classification as mineral species. Many micas, chlorites, scapolites, etc., are omitted altogether; but the omissions are not serious, for all the important data have been many times collected in the larger treatises on mineralogy, and are, therefore, easily accessible.

* This table contains only a moderate number of the many determinations which have been made relative to the specific gravity of alloys. Only those alloys have been admitted which allow of relatively simple chemical formulae. Some of them are doubtless true chemical compounds, but in most cases the formulae merely represent proportionate composition.

APPENDIX.

NOTE ON THE SPECIFIC GRAVITY OF WOOD.

Although wood is a substance which does not come within the scope of these tables, the following references to literature are given as a matter of convenience.

ASCHAUER.—Dove's Repertorium, 1, 142.

BRISSON.—Pesanteur Spécifique des Corps.

ESTRADA.—Cuban woods. Van Nostrand's Magazine, 29, 417. 1883.

HÖR.—Beiblätter (Wiedemann's), 2, 534.

IHLESEN.—Amer. Journ. Sci. (3), 17, 125.

KARMARSH.—Dove's Repertorium, 1, 141.

KOPP.—Dove's Repertorium, 7, 171; also Ann. Chim. Phys. (3), 6, 380.

MENDENHALL.—Ohio Agricultural and Mechanical College, Report for 1878.

OSBORNE.—"Report on Class III," Melbourne Exhibition of 1861. Many data for Australian woods and essential oils.

SHARPLES.—Vol. IX, Reports of Tenth U. S. Census. Complete as to woods of the United States.

SMITH.—Journ. Chem. Soc., June, 1880, p. 417.

WILEY.—Purdue University (Indiana) Report, No. 2, 1876.

Many figures are also given in Böttger's "Tabellarische Uebersicht."

INDEX

TO THE

LITERATURE

OF THE

WASHINGTON:
PUBLISHED BY THE SMITHSONIAN INSTITUTION.
1888.

PRINTED AND STEREOTYPED BY

AT WASHINGTON, D. C.

ADVERTISEMENT.

With the rapid accumulation of scientific memoirs and discussions, published from year to year in numerous journals and society proceedings, a constantly larger expenditure of time and labor is required by both the investigator and the student, to learn the sources of information and the condition of discovery in any given field. Hence is felt the growing need of classified indexes to the work done in the various fields of research, and hence the corresponding tendency of the age to supply such demand.

The present work aims at a general survey of Spectroscopic Literature, with references to authorities in its more special subdivisions, and it has been prepared for the Institution by Mr. Tuckerman, without other remuneration than the expectation of serving the interests of scientific inquirers.

It has been brought down to the middle of the year 1887.

S. P. LANGLEY,
Secretary Smithsonian Institution.

WASHINGTON, *February*, 1888.

P R E F A C E .

This work is intended to be a list of all the books and smaller treatises, especially contributions to scientific periodicals, on the spectroscope and spectrum analysis from the beginning of our knowledge upon the subject until July, 1887; an Index or Bibliography of the Spectroscope and Spectrum Analysis.

It was begun at the suggestion of Dr. Wolcott Gibbs, whose work in connection with the subject is well known.

The object is to enable a chemist to find out at a glance all that has been published in any branch of his subject where the spectroscope is used, and what every writer has published.

The method pursued has been as follows: 1, to examine the bibliographies, booksellers' catalogues, and books on spectrum analysis for books; 2, to examine the scientific periodicals for the shorter treatises, the first and original contributions to the subject, and this was done volume by volume wherever there was no index to a series of years—as in the *Comptes Rendus* and the later volumes of the *Annales de Chemie et de Physique* and of (Poggendorff's, now Wiedemann's) *Annalen der Physik und Chemie*, as well as others. Use was made of the bibliography at the end of Roscoe's *Spectrum Analysis*, and in the reports of the British Association for 1881 and 1884, for such books and articles as the author could not find elsewhere. Credit is also due to the Astor Library and its managers for the means it afforded the author of making this Index.

After the greater part of the material was collected it was divided into such subjects as the titles indicated, in alphabetical order, easy finding being constantly kept in view. Titles have often been repeated more than once so as to make sure of their being found. Finally, at the suggestion of the Smithsonian Institution, the List of Authors was added.

The author hopes that his two objects, fullness and ready access of all the titles, will prove to have been gained.

NEW YORK, 1887.

SUPPLEMENT.

As the omission of the authors' names in connection with references to the *Jahresberichte der Chemie* has been pointed out as a serious defect in the Index, these names are now supplied below.

Jahresber. d. Chemie	(1847-'8), 161, analysis, by Draper.
"	" (1847-'8), 164, analysis, by Becquerel.
"	" (1847-'8), 197, analysis, by Brewster.
"	" (1847-'8), 197, analysis, by Airy.
"	" (1847-'8), 198, analysis, by Melloni.
"	" (1847-'8), 198, analysis, by Brewster.
"	" (1847-'8), 221, chlorine and hydrogen, by Favre and Silbermann.
"	" (1849), 164, photography of, by Becquerel.
"	" (1850), 154, lines in the sp., by Brewster.
"	" (1851), 151, longitudinal lines, by Ragona-Seinà.
"	" (1851), 134; (1852), 117, interference sp., both by Nobert.
"	" (1851), 152, Fraunhofer lines, by Broch.
"	" (1851), 152, electric sp., by Masson.
"	" (1852), 124, Fraunhofer lines, by Phillips and by Merz.
"	" (1852), 125, analysis, by Stokes.
"	" (1852), 125, longitudinal lines, by Zantedeschi.
"	" (1852), 126, measurements of the sp., by Porro.
"	" (1852), 126, 131, analysis, by Helmholtz.
"	" (1853), 167, Fraunhofer lines, by Kuhn.
"	" (1853), 167, Longitudinal lines, by Salm-Horstmar.
"	" (1853), 178, colors, by Grassmann.
"	" (1854), 137, Fraunhofer lines, by Heusser.
"	" (1854), 197, solar sp. in general, by Becquerel.
"	" (1855), 123, analysis, by Helmholtz.
"	" (1855), 123, lines of the sp., by Grassmann.
